STATE OF FLORIDA
DEPARTMENT OF BUSINESS AND PROFESSIONAL REGULATION
DRUG WHOLESALE DISTRIBUTION ADVISORY COUNCIL

DATE: Thursday, February 16, 2017
TIME: Commenced at 9:30 a.m.
Concluded at 11:00 a.m.
LOCATION: Homewood Suites
2987 Apalachee Parkway
Tallahassee, Florida

COUNCIL MEMBERS :

STEVE MAYS, CHAIR
JEENU PHILLIPS, VICE CHAIR
BRIAN FILES
SCOTT BROCK
DEAN ELLIS
JEFFREY TULLER
PATRICK BARNES
PETER HART
JENNIFER GOLDMAN, MD

DBPR STAFF :

REGGIE DIXON, DIVISION DIRECTOR
DREW WINTERS
RENEE ALSOBROOK
DINAH GREENE

CERTIFICATE OF REPORTER

81

1 P R O C E E D I N G S

2 CHAIRMAN MAYS: Good morning, everyone. This
3 is Steve Mays. I would like to call this meeting
4 of the Drug Wholesale Distributor Advisory Council
5 to order.

6 I see we have a court reporter. I just want
7 to remind everyone to identify yourself before you
8 speak so the court reporter will know who is
9 speaking for the record.

10 For those of you on the phone, please mute
11 your Line when you're not speaking, and whatever
12 you do, please do not put us on hold so we don't
13 have to listen to your background music and so
14 forth.

15 Ms. Greene, you want to do a roll call?

16 MS. GREENE: Yes, sir.

17 Jeenu Phillips.

18 MR. PHILLIPS: Here.

19 MS. GREENE: Brian Files.

20 MR. FILES: Here.

21 MS. GREENE: Michael Mone.

22 (No response.)

23 MS. GREENE: Scott Brock.

24 MR. BROCK: Here.

25 MS. GREENE: Arlene Elliott.

1 (No response.)

2 MS. GREENE: Dean Ellis.

3 MR. ELLIS: Here.

4 MS. GREENE: Jeffrey Tuller.

5 MR. TULLER: Here.

6 MS. GREENE: Patrick Barnes.

7 MR. BARNES: Here.

8 MS. GREENE: Peter Hart.

9 MR. HART: Here.

10 MS. GREENE: Jennifer Goldman.

11 DR. GOLDMAN: Here.

12 MS. GREENE: And Steve Mays.

13 CHAIRMAN MAYS: Here.

14 MS. GREENE: You have a quorum, sir.

15 CHAIRMAN MAYS: All right. A couple of
16 things I would like to start with before we get to
17 the agenda. First, I want to welcome our new
18 physician member to the Council, Dr. Jennifer
19 Goldman.

20 Dr. Goldman, would you like to tell us a
21 little bit about yourself.

22 DR. GOLDMAN: Sure. Good morning. Thank you
23 all so much for inviting me here.

24 I am a family physician and I'm the Medical
25 Director of South Broward Community Health

1 Services, which is the primary care arm of
2 Memorial Healthcare System in the Fort
3 Lauderdale/Hollywood Florida, area.

4 CHAIRMAN MAYS: Great. Well, we look forward
5 to your contributions to the Council.

6 DR. GOLDMAN: Thank you.

7 CHAIRMAN MAYS: Second, I want to share some
8 news that we're losing Reggie Dixon as the
9 Director of the Department. And he's been
10 announced as the new Chief of Staff.

11 Reggie, would you like to say a few words?

12 MR. DIXON: No. I just thank you for
13 everything. I think you guys are in good hands.
14 My replacement is Drew Winters. You will find
15 that he is an exceptional Director. We've already
16 started working on a bunch of things and I think
17 you guys will be definitely pleased with his
18 leadership.

19 CHAIRMAN MAYS: Drew, welcome.

20 MR. WINTERS: Thank you. I appreciate it and
21 look forward to working with everybody.

22 CHAIRMAN MAYS: We look forward to working
23 with you.

24 Finally, as has been practiced in past
25 meetings, I will start the meeting off by reading

1 the goals of the Council as stated in Chapter
2 499.01211 of the Florida Statutes. "The Council
3 shall review this part and the rules adopted to
4 administer this part annually, provide input to
5 the Department regarding all proposed rules to
6 administer this part, make recommendations to the
7 Department to improve the protection of
8 prescription drugs and public health, make
9 recommendations to improve coordination with other
10 states' regulatory agencies and the federal
11 government concerning the wholesale distribution
12 of drugs and make recommendations to minimize the
13 impact of regulation of the wholesale distribution
14 industry while ensuring protection of the public
15 health."

16 So we'll get on into the agenda. Under Tab 1
17 in the Chair's report, Heather Zenk is here from
18 AmerisourceBergen to provide the Council with a
19 Drug Supply Chain Security Act update.

20 As some of you will recall, Heather gave us
21 an update back in August of 2015, and I know
22 there's been a lot of developments since then. So
23 what I'll do, before Heather gets started, I'll
24 read a brief bio.

25 Those of us that are blocking the screen may

1 have to move over to the side a little bit.

2 Heather Zenk is a registered pharmacist,
3 PharmD, is Vice-President of Global Secure Supply
4 Chain operations of AmerisourceBergen Corporation.
5 In this role, Heather has responsibilities for
6 developing and implementing traceability business
7 processes and technology that will enhance patient
8 safety, further secure the pharmaceutical supply
9 chain and create broader service offerings to the
10 manufacturer partners and AmerisourceBergen's
11 customers. In addition, Heather manages
12 manufacturer programs and data.

13 Heather has over 15 years of pharmacy
14 procurement and supply chain experience which she
15 has utilized through her career in
16 AmerisourceBergen, including that of
17 Vice-President and Distribution Center Manager at
18 the Chicago Distribution Center, SAP Business
19 Liaison and running operations at the Canada
20 Distribution Network.

21 Prior to joining AmerisourceBergen
22 Corporation in 2007, Heather worked in Walgreens
23 as a pharmacist and Manager of Generic Procurement
24 and Strategic Solutions. As part of her
25 dedication to patient safety and advocacy, she

1 continues to maintain her license to practice
2 pharmacy in Minnesota as well as in Illinois.

3 Heather received a Bachelor of Arts degree
4 from College of Saint Benedict's in Saint Joseph,
5 Minnesota and a Doctorate of Pharmacy degree from
6 the University of Minnesota.

7 So at this point, we'll turn it over to
8 Heather.

9 MS. ZENK: Thanks. I said it sounds a little
10 bit like my mother and father. But thank you all
11 for the time today. I know many of you, I've been
12 here before, or I have other colleagues in this
13 space that do equal amounts of work around the
14 federal implementation of DSCSA.

15 I'll try to stick to some highlights.
16 There's a lot of slides, I apologize. But I think
17 we'll try to say, you know, how did we get here as
18 a reminder? So we did end up here because we had,
19 I think, at one point about --

20 MS. GREENE: Can everybody see that?

21 (Affirmative response.)

22 MS. ZENK: And, please, interact. If there's
23 a question or there's an acronym or a term that
24 you're not aware of, it's not going to hurt my
25 feelings to ask. I kind of live, eat and breathe

1 this every day, as does Mr. Files and a few others
2 in the room, so we tend to talk in code and we
3 don't even know it's code anymore, so please ask a
4 question.

5 Some of the reason, just so we remember how
6 we got here, is that we did have 28 to 32 states
7 that have some type of record-keeping requirement,
8 licensure requirement or pedigree requirement, and
9 we did actually as an industry -- and by "the
10 industry," I mean the pharmaceutical industry, so
11 even a bit more than just the wholesaling
12 industry. We actually petitioned Congress and
13 worked with the FDA and worked with yourself and
14 other agencies that had stakeholder share in the
15 pedigree law and said we really do need to have
16 one manner in which to secure the pharmaceutical
17 supply chain in the US.

18 So at times where I think there's frustration
19 that, you know, not many states are changing their
20 requirements to align with federal, et cetera, I
21 try to remind everybody you actually wanted this.
22 This is something as an industry that we felt
23 would add additional protection to patients and to
24 patient safety and to the pharmaceutical supply
25 chain if we were all under one federal regulation.

1 The other reasons that we got here are to do
2 with -- particularly here in Florida and also in
3 California -- there was serialization requirements
4 that were going to go into place and we were
5 really struggling as an industry to say we can't
6 have 50 different flavors -- I say of ice cream --
7 we needed one manner in which to do this because
8 this is a very complicated process for the
9 pharmaceutical supply chain to undertake and we
10 needed one way to go about doing that.

11 We've also seen this start to happen
12 globally. So not only just is the US implementing
13 this requirement, we have 40-plus countries
14 throughout the globe. And from our manufacturer
15 trading partners, they stated we're going to
16 struggle to comply globally, we can't possibly
17 comply with an Indiana requirement, a New York
18 requirement, a Florida requirement and a
19 California requirement all being different, we
20 really need to have one manner in how to handle
21 and secure the US supply chain in a harmonized
22 way.

23 So that was kind of how we got here. I won't
24 go into the details. We just kind of put these in
25 as background. I think everyone is aware.

1 This is, you know, a federal requirement that
2 had two sections, it was passed in 2013. Jokingly
3 it was passed the day after Thanksgiving so my
4 pharmacy humor -- and I apologize if there are
5 actually funny pharmacists out in the world, I am
6 not one of them -- but we say we don't know if
7 President Obama pardoned the turkey then the
8 signed or signed the law, then pardoned the
9 turkey. But it was signed the day after
10 Thanksgiving in 2013.

11 Interestingly enough, the first part of the
12 bill was about compounding and the second part is
13 around pedigree or the Drug Supply Chain Security
14 Act. Pictorially this is just a timeline to
15 outline. So for those on the phone, I'm on slide
16 four.

17 So pictorially we've attempted to try -- and
18 believe it or not, this is what I use actually
19 internally and when we talk at any event we tend
20 to use this timeline so people understand that
21 this was a lengthy federal law that took -- that
22 is taking place over the course of ten years so
23 there are various requirements that go into place
24 over the course of time.

25 And the intent of that was to allow the

1 industry to work together to solve any concerns or
2 operational impacts that might take place and
3 allow us enough time to work through that versus
4 there being undue burden on regulatory agencies or
5 the FDA to mandate a significant amount of
6 activity that just might not be the most optimal
7 way for the supply chain to advance the security.

8 So moving on to slide five, which, again, is
9 a bit of background. These are just the data
10 elements. So you'll hear reference frequently to
11 the three T's or TI, TH, TS. We just wanted to
12 include what those were. I think everyone in the
13 room is well aware of what those are.

14 So I'm going to take a little bit of time and
15 go through what's upcoming now. So we've kind of
16 gotten to a point where on the timeline slide we
17 have implemented anything to the left clearly
18 before '17. So mostly what that was was that
19 there were some procedural changes around making
20 sure the industry knew who was authorized treating
21 partners, whoever is to do business with. There
22 is some updates around identifying suspect and
23 illegitimate product and what are those processes
24 and procedures. And then there's also been this
25 exchange of information, and that's the TI, TH,

1 TS.

2 So the bulk of the industry has spent a
3 significant amount of time working through how we
4 exchange those datasets. But there are things
5 coming up. And I won't go through ad nauseam each
6 of these. We've tried to extract these out and
7 re-standardize, if you will, the need to talk
8 about requirements that are on that timeline.

9 So I'll spend today mostly talking about
10 what's coming up in '17 at the end of this year.
11 So on November 27th of 2017, the manufacturers are
12 required to place a serialized 2D DataMatrix
13 barcode on the smallest saleable unit in the US
14 market.

15 So what does that mean? We'll show you some
16 examples. I'll show you what we're seeing. We'll
17 show you on both good and bad. I say we kind of
18 protect the innocent and the guilty in this
19 example. And then I'll spend a little bit more
20 time focusing on 2019, which is the next
21 requirement that is the big requirement in the
22 statute, and that has to do with wholesalers and
23 returns that would be saleable in the marketplace
24 that would come back from pharmacies that they're
25 servicing.

1 I'm not going to go into a significant amount
2 of detail on what's happening in 2020, and 2023,
3 just because I think in the urgency of time and
4 relevance.

5 So I am now, for those on the phone, on slide
6 nine. You should see two pictures. And a little
7 bit about what are we looking at. So on
8 November 27, 2017, the Federal Statute says a
9 manufacturer shall place this 2D DataMatrix
10 barcode that you see on the bottle and on the
11 case. So on a homogeneous case in the smallest
12 saleable unit, which it's just easiest we said to
13 talk in bottles, but if there's questions around,
14 you know, vials, syringes, other things, we can
15 talk about that afterwards.

16 With that said, each of that -- that 2D
17 DataMatrix barcode will have four data elements
18 contained within it by statute. Though four data
19 elements are -- it's a product identifier. New
20 acronym, GTIN, G-T-I-N, stands for global trade
21 identification number. It will have the NDC code
22 or the national drug code embedded within it, but
23 it is a way uniquely to identify a product. After
24 that will also come a serial number, the
25 expiration date and the lot number. So all four

1 of those data elements will be encoded in that one
2 barcode. And you can see examples of what they
3 look like on physical packages today.

4 So not to pull a Facebook card, but you can
5 see on the top of ten we kind have the thumbs down
6 like wah, wah. Here's what we're actually seeing
7 in the marketplace.

8 So slide nine was a bit of -- that would be
9 the gold standard. Unfortunately, what we are
10 seeing is not standardized barcodes today. We're
11 not seeing ones that we can read, we're not seeing
12 data elements that are encoded accurately or
13 correctly, and we're seeing a bit of -- or a lot
14 of people doing a lot of work and a lot of effort
15 but maybe not doing it in an accurate, correct
16 fashion. So just trying to show you what's out
17 there for real.

18 I think, you know, we'll get there, we'll be
19 optimistic, we'll work hard and we'll get there,
20 but we are not seeing at this point in time even
21 consistent linear barcodes which are in today's
22 environment. So as we move forward to
23 serialization, there is a bit of a concern on how
24 do we get over this hurdle.

25 So going into what is the industry doing. So

1 in particular, we've been working with HDA, which
2 is previously HDMA, so today it's the Healthcare
3 Distribution Alliance, which is the federal
4 organization that all of the primary wholesalers
5 use as both a lobbying arm and also a
6 standardization and guidelines arm and a supply
7 chain and involvement arm. They have gone forward
8 with best practices in barcoding. And it outlines
9 more than I ever wanted to know, trust me, more
10 than you ever wanted to know, about barcodes. It
11 does go through how do you encode it, where's the
12 placement, what do we do with duplicate. If I
13 would pick up and want to start a manufacturing
14 entity today and knew nothing about barcodes, this
15 would be a good place to start.

16 So as we look ahead, we are learning things
17 that, believe it or not, we hadn't learned before.
18 So on the first time we had shown that -- if you
19 can see on the top barcode here, that 2D barcode
20 is on the interior of the corner. Well, what we
21 were doing is we actually conducted a pilot where
22 we just were trying to read barcodes that were
23 coming into our warehouse. And what we found is
24 that we've, unfortunately, placed that barcode in
25 the most vulnerable place on the actual physical

1 case on that corner. And we were seeing then if
2 you're stacking two or three high, that bottom one
3 might have enough of a wrinkling on the case,
4 couldn't read the barcode. So we went back to HDA
5 to say we should put the 2D barcodes on the
6 exterior of that corner wrap.

7 So I know this is just riveting stuff, trust
8 me. But believe it or not, this will matter. And
9 we were really trying to get out ahead of this so
10 we could talk with our trading partners and
11 manufacturer partners to say let's move it to the
12 exterior now versus us having a requirement that
13 we're looking at and then we can't read any
14 barcodes and then potentially that product becomes
15 suspect at that point in time.

16 So for those on the phone I am now on slide
17 13. So these are some more, unfortunately, not
18 positive examples that we're seeing. And some of
19 them, like I said, I know there's a lot of jargon
20 in here, but we're seeing non-consistent terms
21 used, we're seeing, you know, things that just
22 aren't standard according to that, and we're
23 really trying to identify these and have
24 one-on-one conversations with the trading partners
25 that are sending these to us, which we're fully

1 starting to understand it becomes more complicated
2 the further we dig down.

3 So on slide 14, though, here are some
4 positives in the marketplace. These are
5 manufacturers that are doing things according to
6 both the HDA standard and then also GS1 Global is
7 also an entity that talks about data capturing and
8 data sharing. GS1 Healthcare has really helped
9 the whole industry globally understand how can I
10 use the same standards to apply anything that I
11 sell throughout the globe and use that same
12 nomenclator and that same language and that same
13 DataMatrix. If people aren't familiar with them,
14 they are the same people that did the UPC. So
15 when you think of a soup can or Wrigley's Gum,
16 same companies, our same standards organization
17 GS1 is helping us do this too.

18 So with the good comes the bad. So here are
19 some of the bads that we're seeing on slide 15.
20 Interestingly enough, the top one is we had a
21 manufacturer that's like I'm going to put the 2D
22 barcode on the bottom of the bottle, which sounds
23 genius until you start to realize that it doesn't
24 stick after a certain while because it's concave.
25 So that little sticker -- the picture on the right

1 of that is supposed to be my distribution center
2 floor where there's a million stickers. So you
3 tend to go out on a distribution center floor and
4 you come back and you have to make sure you don't
5 have any stickers on the bottom of your shoes. So
6 good intentions, maybe wrong location application
7 for a manufacturer.

8 We're also seeing manufacturers on the second
9 one down not use the same nomenclator to identify
10 the data elements in the barcode. So the top one
11 is the GTIN, which we've learned to -- I said
12 protect the -- actually, in this example, protect
13 the guilty. The UID, which we believe stands for
14 unique identifier, but really it's the serial
15 number. And it's really not that big of a deal
16 except that by the time it gets to a pharmacy or
17 gets to a hospital or gets to a retailer, the more
18 differences we're seeing manufacturers use, the
19 more trouble it's going to be for them to
20 understand what data elements am I looking at.
21 And then the lot number and expiring date.

22 The other thing we're seeing, which is on the
23 bottom, is we're seeing some placing them too
24 close to the linear barcode. And to date we know
25 many of the hospitals clearly use the linear

1 barcode for bedside scanning. And we also have
2 retailers that use that as a means to make sure
3 they're filling the accurate medication to the
4 accurate prescription for the patient. And the
5 closer those two get, the harder it comes to
6 actually read both of them in an accurate form.
7 And these are all things that we've learned over
8 the last 12 to 18 months. Like I said, more about
9 barcodes than you ever wanted to know.

10 Is there any questions?

11 (No response.)

12 MS. ZENK: Like I said, we tried to show
13 it -- it's a little more impactful, a picture is
14 worth a thousand words.

15 I'm going to take a little bit of time now to
16 go through what HDA as an organization, or all of
17 the primary wholesales, have been engaged in,
18 along with our manufacturer trading partners over
19 the last, I'm going to say about 16 months, what
20 we've been working on. So we've really been
21 focused on that November 2019 requirement where it
22 says when -- the law says when a pharmacy has a
23 saleable return that comes into a wholesaling
24 entity, that wholesaler must validate the serial
25 number's accuracy and we must also know which

1 transactional information, statement and history
2 is tied to that return.

3 Well, we started out by, you know, talking
4 with the manufacturers, and the manufacturers are
5 like, oh, well, that's between you and the
6 pharmacies, that's a wholesaler pharmacy concern.
7 And we started to say to them, well, but is it,
8 because we have to have a way to know that that
9 serial number is real and how are we going to do
10 that. And they started out again by saying,
11 again, this is really -- like we want to help you,
12 we really appreciate it, but this is your
13 requirement. Well, then we started to pull some
14 numbers.

15 So we do at times as a service to the
16 pharmacies take back returns that are sealed and
17 that they've ordered and can provide an invoice
18 number to us that we can take back into our
19 inventory and we resell throughout the US.

20 It is 2 percent of units, which doesn't sound
21 like a whole lot until you start to look at the
22 unit numbers. So 2 percent of units is almost
23 59 million units throughout the US. Then it
24 became real, because if you look on the bottom
25 right-hand side of volume, so for a large

1 distributor like AmerisourceBergen, that's roughly
2 about 19 million units a year.

3 And like we said, we have succinct processes
4 and procedures today. It must come back, it must
5 be in date, it must have an invoice number
6 associated to it and it must come back in a sealed
7 form. So there are certain requirements today
8 that we already follow procedurally, but now
9 adding on to now I have to know the TI, TH, TS and
10 I must also know the serial number, this becomes a
11 large problem.

12 Again, many of the manufacturers said, well,
13 you can just send me an email, send me an email
14 with that information in it. And then we said,
15 well, for a large manufacturer, that's 2 million
16 emails a year. So we kind of started to joke --
17 or they said, call me. So then we started to say,
18 well, do you want us to play the hotline bling
19 songs behind the scenes?

20 So we really wanted to make sure that they
21 understood and we understood this is an industry
22 opportunity to solve this. It is in the
23 wholesaler requirement section of the federal
24 statute, but we can't do this alone. And if we
25 can't can validate that that product is saleable,

1 it becomes non-saleable in the marketplace and it
2 would go to a reverse processor for destruction.
3 The dilemma that that becomes is the product is
4 actually viable product and safe product, it could
5 be redistributed in the marketplace.

6 So then that became real also for me in the
7 financial perspective, that that 2 percent would
8 come out of the supply chain and that a
9 manufacturer would need to produce 2 percent of
10 product sooner. So for those manufacturers, it
11 really replicated into a 4 percent supply chain
12 inventory opportunity.

13 So what did we look at ways to solve this?
14 So the ways that we look at to solve this are if a
15 manufacturer could provide identifiers, so provide
16 the serial numbers to the entity that they sold it
17 to. So in the event -- and I always preface this
18 by saying I pick on Pfizer, publically I pick on
19 Pfizer. Pfizer sends AmerisourceBergen 100,000
20 serial numbers and 100,000 units. I accept those
21 units. I sell ten bottles of Lipitor -- let's
22 pick on Lipitor again -- out to Heather's
23 dispenser. Heather inadvertently -- I meant to
24 order one, I didn't mean to order ten. I initiate
25 a return back to AmerisourceBergen for the nine

1 units that I inadvertently ordered.

2 We would then at the wholesale level have the
3 ability to look at our internal database to say,
4 yes, those nine serial numbers are real because I
5 received them from Pfizer. One way to solve this
6 problem. But the manufacturer still has to have
7 the ability to provide the information to the
8 wholesaler.

9 The second way we thought we might be able to
10 solve this is in the event a manufacturer could
11 not provide serial numbers to a wholesaler, that
12 wholesaler could scan each unit that they sold out
13 and then build up that repository inside their
14 database to say now I know that's a serial number
15 the manufacturer had on a bottle so I know that's
16 a valid number when it comes back.

17 The third way, we talked about do we have a
18 central repository? Would the manufacturers
19 provide all of the serial number information into
20 one location? And then would we have distributors
21 that would access that information once a return
22 came into their wholesaling location, go to that
23 location and validate that number? It could be
24 done.

25 Some of the concerns were around, if you

1 will -- we're all in an age where hacking comes up
2 quite frequently, security of data. There was a
3 bit of a concern that there would be one location
4 where all of the serial numbers for the US market
5 would be and many of the manufacturers -- and I
6 don't fault them at all -- had a bit of concern
7 about what that security would be, or if we made
8 it so secure, would it be too difficult for the
9 industry to actually access and use?

10 Last but not least, we came up with an idea,
11 we're calling it a verification query service.
12 And I'm sure we will acronym it at some point to
13 make our lives even more complicated. We said,
14 what happens if each manufacturer, you couldn't
15 provide the data, they held their own data, like
16 they do today, a return comes in from a dispenser
17 to a wholesaler, that wholesaler, because there's
18 logic, remember, in that product identifier or the
19 NDC? So if I get two bottles back, I scan those
20 two bottles into the verification service and it
21 knows this one is Eli Lilly and this one is
22 Pfizer. And then it has an address that it goes
23 out to and says, Pfizer, can you please validate
24 this serial number is real and, Lilly, can you
25 please validate this serial number is real. And

1 it would all come back to the distribution and
2 allow that distributor to make a disposition of,
3 I'll call it thumbs up, thumbs down or a red
4 light, green light.

5 TELEPHONE PARTICIPANT: Drug wholesale. It's
6 a drug wholesale advisory, not the drug advisory
7 wholesale.

8 MS. GREENE: Please mute your phone.

9 MS. ZENK: Go ahead, Steve.

10 CHAIRMAN MAYS: Anyone on the phone, if you
11 could mute your phone, please. Thanks.

12 MS. ZENK: So with that said, I think we did
13 come to some conclusions and we did work as an
14 industry to come up with some opportunities. I
15 won't go through a lot of the project management
16 lessons learned because those are pretty much
17 self-explanatory. But we'll work through what
18 came out as preferred solutions.

19 So what the industry said is the best two
20 approaches that we think we can take those
21 saleable returns in '19 and continue to move in
22 the supply chain would be if a manufacturer sends
23 data and the wholesaler stores that information
24 and/or uses verification service.

25 This verification service that we just talked

1 about as a last option does not exist today in the
2 marketplace. We are working with technology
3 companies and with HDA again on how do we develop
4 that and work and bring that forward as a viable
5 solution for use.

6 Okay. I'm going to take a breath. Is there
7 any questions I guess about what was done and what
8 conclusions, you know, we came to about how the
9 industry, I think, wants to use and what we want
10 to use for the saleable returns requirements?

11 (No response.)

12 MS. ZENK: Okay. So I'm going to spend a
13 little bit on an FDA update on some of the hot
14 topics and then see if there's any additional
15 questions or concerns that people are experiencing
16 at this point.

17 So the FDA to date has released guidelines or
18 guidance for the industry around product tracing
19 for the four dispensers. They do have a
20 compliance policy that's been published. They
21 have published identification of suspect and
22 illegitimate product. They do have -- I'm going
23 to say half of it they have finalized and now
24 they've submitted a second half that's in draft,
25 their own suspects and illegitimate.

1 They have also gone through and released
2 guidance on 3PL and wholesaler database and how to
3 report up to the federal database. So all of us
4 today in the wholesale or 3PL space are publishing
5 state licenses and state locations into that
6 federal database at this point in time. And
7 they've also released guidance on first
8 responders.

9 So any ambulatory agency or first responders,
10 at times they actually procure product from their
11 local hospital or local clinic, and that is
12 something that the FDA felt was relevant to keep
13 intact and so they have published guidance on that
14 on how that transaction between maybe a local
15 clinic or a local hospital is exempt from DSCSA
16 requirements in order to provide pharmaceuticals
17 to first responders.

18 They have not yet released guidance on 3PL
19 licensure and wholesaler licensure, which was
20 actually statutorily required to be released on
21 11/27 of '15, so we're a little late from them.
22 Albeit, every time we actually pester them, pester
23 where they feel like we're stalking them, they
24 tell us it's in process, it's in process. So we
25 know that there's a lot of agencies that have to

1 get eyes on that before it's released in guidance
2 form. And then it will go through the public
3 review period and more than likely a couple of
4 drafts before final. But we are eagerly
5 anticipating that.

6 They have not yet released guidance on
7 grandfathering. And what that means for those in
8 the room is on 11/27 of '17, the statute says the
9 manufacturer shall place this 2D barcode on
10 product. Well, many of the manufacturers, I'll
11 put it my words, are they saying in commerce,
12 anything going into commerce on that date must be
13 serialized or anything that's produced on the
14 production line after that date?

15 Given I'm from the midwest and I grew up in
16 South Dakota, I think of it as the born-on date,
17 which I realize is a Budweiser reference. But I
18 think of it as is it the born-on date or is it
19 what's in commerce?

20 That guidance was also supposed to be
21 released over a year ago. And so at this point, a
22 lot of the industry groups that have been working
23 together and the manufacturers have said we need
24 it to be the born-on date or I can't comply with
25 the requirement. So the industry has gone forward

1 in lack of guidance and used as a general common
2 understanding that it's the born-on date for those
3 requirements that are in place today.

4 They also need to release something on
5 waivers, exceptions and exemptions. And what that
6 means is say I made a small business and it's an
7 undue burden for me to comply with this
8 requirement, what does a waiver look like, how do
9 I apply for it, how can I prove it's inadvertently
10 burdensome on my business? So they have to
11 release how that would work.

12 They also needed to release to the industry
13 any exception or exemption around packaging. So
14 think of it as if the package is too small to
15 physically get that 2D barcode on, how does a
16 manufacturer apply for exemption for that product
17 or is there products that -- they do list out a
18 classification of drugs. So like blood product is
19 exempt, radio products are exempt, so they do have
20 categories, but they don't have specifics around
21 them. So the industry was anticipating that they
22 would release something a bit more structured on
23 what those exemptions looked like.

24 In today's world, how the industry is
25 functioning with exemptions are if a manufacturer

1 tells me in my 300 pharmaceutical products that I
2 sell to you, ten of them are exempt. We are
3 honoring that decision by the manufacturers so we
4 would not be expecting TI, TH, TS information to
5 come in and we would not be providing TI, TH, TS
6 information for those exempt products based on the
7 manufacturer's decision.

8 So I'm going to breathe because there might
9 be some questions around, I guess, what the FDA
10 has or has not published or how the industry is
11 functioning, I guess, today in light of these
12 guidances or lack thereof.

13 MR. PHLLIPS: So the licensure you're talking
14 about here is state licensure?

15 MS. ZENK: They will issue a federal
16 licensure. And then the states have the ability
17 to replicate that same federal licensure at a
18 state level. And they can inspect against that.
19 They can, if you will, receive revenue for that.
20 But they cannot go -- it's a floor and a ceiling.

21 So in the sense once the FDA would publish
22 that and the states would adopt that, we are under
23 then for the US market one wholesaler licensure
24 that's standardized. But every state can adopt
25 that and inspect against. That's the big one,

1 particularly for all of us in the room that we've
2 been -- I said, can I get it, can I get it, can I
3 get it?

4 Other questions?

5 (No response.)

6 MS. ZENK: Okay. We'll go through a few what
7 I call hot topics or industry, I guess, buzz, or
8 maybe it's more industry pain. But what are some
9 of the things that have challenged I think the
10 industry and then what we have done as a
11 wholesaling industry as part of the retail
12 community, as part of the repackaging community,
13 as far as the pharmaceutical community, how have
14 we worked through some of these and what have we
15 done?

16 A lot of times what happens is if there is a
17 trading partner concern that gets escalated, we
18 tend to first take it to HDA, but we also then
19 take it to another organization called PDSA, so
20 the Prescription Drug Security Alliance. And that
21 group has manufacturers, pharmacies, hospitals,
22 and wholesalers, so it's more of a cross-industry
23 organization that we all belong to.

24 There is a member -- you do pay to belong to
25 that, but it also has greatly helped in the

1 implementation and operationalizing of the federal
2 statute.

3 Drop shipments are an industry hot topic. So
4 the federal statute is focused on the change of
5 ownership. They do not track in the federal
6 statute, the way it's written, the possession or
7 the location of the drug. It cares about upon
8 change of ownership, we pass the data -- we pass
9 the TI, TH, TS to each other, so we pass that upon
10 ownership.

11 The dilemma becomes with drop shipments
12 are -- the way they work, particularly for the
13 retail and hospital community, is they may order a
14 product that is drop shipped directly from a
15 manufacturer from their wholesaler. The
16 wholesaler produces an order to that manufacturer
17 on behalf of the hospital. That manufacturer
18 fulfills the order and ships the order directly to
19 the hospital or the pharmacy and then the
20 wholesaler invoices that.

21 So I just said the law really only the cares
22 about who owns the product. The one exception in
23 the statute, and there is specific language that
24 carves out drop ships. So in that example, it
25 says, the shipping entity is accountable to

1 provide the TI, TH, TS to the dispenser that it's
2 shipping to it. And the reason for it is if you
3 think logically is that at some point the -- well,
4 the TI information that has the lot number on it.
5 The wholesaler never physically sees the product.
6 I couldn't attest to the lot number or the serial
7 number later on down the road. I can't attest to
8 what serial number is on that package, where the
9 entity that ships it at the manufacturer level
10 can. So that's why this is the one time in this
11 statute we break the rule around following the
12 change of ownership with the transactional
13 information, statement of history.

14 Does that make sense? I know it was a little
15 bit confusing.

16 (Affirmative response.)

17 MS. ZENK: Okay. So that one causes some
18 consternation. And if you're particularly a
19 hospital entity or you're a retailer, you need to
20 now identify -- and realistically, they're
21 probably receiving drop ships from anywhere
22 between 50 to 70 manufacturers at this point in
23 time, so you need to identify those items,
24 understand how that information is coming into you
25 today and how to store and retrieve it in order to

1 comply with the statute.

2 The other thing that's causing the industry a
3 bit of consternation is 340B transactions. So
4 this is also a transaction where the ownership and
5 the physical movement do not stay tied together.
6 So in the event of a 340B, the contract pharmacy
7 orders the product but the covered entity is the
8 accountable financial entity for that product.

9 So in the wholesaling community, I am
10 required to provide the TI, TH, TS to whom I
11 change ownership with, which is not the contract
12 pharmacy, it's the covered entity, but I
13 physically ship the product to the contract
14 pharmacy so they can administer patient care to
15 that patient.

16 That took us a little bit to work through on
17 what does that data look like. We had some
18 conversations with a lot of the contract
19 pharmacies and the covered entities to work
20 together on what does that look like when we tried
21 to solve this.

22 The other industry hot topic that comes up
23 quite frequently is the borrowing and loaning of
24 products, particularly between hospital entities
25 or clinics or some type of emergency care types of

1 locations that provide care. There is a provision
2 in the statute that allows for a patient's
3 specific need to be an exempt transaction, and so
4 we do try to encourage that for use for our
5 hospital entities when they call to say am I
6 supposed to provide the TI, TH, TS to the second
7 hospital that I'm giving a vial of medication
8 because they have a patient that needs it today?

9 There's a lot of internal -- we told them
10 SOP's they need to look at and go back. But that
11 in and of itself -- because in theory what they're
12 doing is they're saying -- hospital number two is
13 calling hospital number one to say, do you have
14 this medication, because I had a patient in need
15 that needs this right now and can I have it or
16 borrow it or loan it?

17 What we tend to see, though, is then that
18 second hospital would reorder it from their
19 wholesaler and give it back to hospital number
20 one. That had been typically the operating
21 procedure and rhythm. Well, in today's world,
22 that second hospital that just did that and gave
23 it back to the first hospital really isn't
24 addressing a patient's specific need at that
25 point, so they would then need to provide the TI,

1 TH, TS back.

2 So I think a lot of hospitals and clinics are
3 really looking at what is their SOP on this, what
4 is their policy and procedure so they don't end up
5 with the Saturday night at 11:00 p.m. -- because
6 that's when it always happens, it doesn't happen
7 Tuesday at noon, it's always Saturday night at
8 11:00 p.m. at night -- so they know how to tell
9 their staff to address that.

10 Is there questions around those? I know
11 those are pretty specific, but yet the devil's in
12 the details and the 90 percent of what we can all
13 do logically is this 10 percent that tends to be
14 the anchor to anchor everybody down.

15 MR. DIXON: I did have one question.

16 MS. ZENK: Yeah.

17 MR. DIXON: Have you all encountered or has
18 there been any real thought given to doing away
19 with the nomenclator of borrowing and loaning,
20 because I know that has been an issue before in
21 the sense that borrowing and loaning implies that
22 you are returning exactly what you received?

23 MS. ZENK: Yes.

24 MR. DIXON: I can loan you my car and you can
25 return my car.

1 MS. ZENK: Yeah.

2 MR. DIXON: But if I give you a medication
3 and you use it for a patient, you are not giving
4 me that same item back, you are giving me another
5 one, a supposedly identical product to replace
6 what you had given me.

7 And I know that for folks within the
8 industry, that can sometimes be difficult, not the
9 concept, but the use of those terms, because from
10 a regulator perspective, it makes it difficult
11 sometimes to have that conversation with the
12 regulated industry. And I was just wondering if
13 there's been any thought or any talks about trying
14 to limit the use of those terms, because as new
15 people come into the industry, it may be difficult
16 to kind of keep that regulatory relationship.

17 MS. ZENK: We have -- from
18 AmerisourceBergen's perspective when we've had
19 hospitals ask us about exactly what you just said,
20 we've tried to say if it's a patient-specific need
21 and pharmacy number one has it and pharmacy number
22 two needs it, you should give that and cite in
23 your records it's a patient-specific need, thank
24 you very much, transaction done. Versus, if you
25 will, that second pharmacy reordering it.

1 And coming back to your point, we've tried to
2 get that to be more of the practice. I think it's
3 pretty ingrained in the hospital marketplace. We
4 see it much more significantly come up with
5 questions with hospitals.

6 MS. GREENE: That's where most of them come
7 from.

8 MS. ZENK: Yeah, that's where most of them
9 come from.

10 And I do know that on a public call, the FDA
11 in so many words said, borrowing and loaning are
12 not terms that we want to talk about. And they
13 continue to get specific questions from the
14 hospital community, from ASHP, and they finally
15 just said, borrowing and loaning is not in the
16 statute, it is not anything we want to address,
17 how you choose to handle that, you either need to
18 look at patient-specific exemption or you need to
19 remove that. They pretty much said, you are
20 either selling it or you're consuming it.

21 And I do believe it was, I think, the
22 Tennessee Pharmacists Association that brought it
23 up, and they were -- it wasn't a shining moment
24 for them, I don't think, on the call.

25 MS. ALSOBROOK: They're the ones that brought

1 it up in the conversation with us, too.

2 MS. ZENK: Was it?

3 MS. ALSOBROOK: Yes.

4 MS. ZENK: So at least they're consistent.

5 MS. ALSOBROOK: They're consistent.

6 CHAIRMAN MAYS: So, Heather, what typically
7 happens, does the borrowing hospital typically
8 purchase that product at a later point and give it
9 back?

10 MS. ZENK: Yeah, and then give it back.

11 CHAIRMAN MAYS: Replace it?

12 MS. ALSOBROOK: Return it.

13 CHAIRMAN MAYS: But it's not really --

14 MS. ALSOBROOK: But it's not borrowed.

15 CHAIRMAN MAYS: Right. Exactly.

16 MS. ZENK: Yeah. So we tried to -- we've
17 tried to help them out if we can. It is quite
18 ingrained.

19 But at the same point, you have also in their
20 defense, the Board of Pharmacy in Tennessee or the
21 Tennessee Pharmacy Association, the FDA said, our
22 law isn't meant to not have you provide patient
23 care. Please don't say that I'm telling you that
24 someone should expire because you don't know what
25 to do about giving one of your partner's care.

1 And the other strange question is you can
2 move product intracompany and not have to --
3 because there's no change of ownership then. So
4 if you're moving it from location number one to
5 location number two, and that's all under, I'll
6 say like St. Mary's Hospital umbrella, you do not
7 have to provide the TI, TH, TS to each entity.
8 But if you move it from pharmacy number one to
9 pharmacy number two and pharmacy number two gets
10 asked to produce transactional information,
11 statement and history, the pharmacy still has to
12 have a way to produce that record.

13 So they're trying to say you don't have to
14 pass data to each other under common ownership,
15 but you are not alleviated from your requirement
16 of producing the record ever. And I think that's
17 some of the things to think through as hospitals,
18 you know, harmonize inventory or some retailers
19 harmonizing inventory between patients, too.

20 MS. ALSOBROOK: It appears that they keep
21 wanting to go back to using it as inventory
22 control and not understanding the exemption that's
23 out there.

24 MS. ZENK: Correct.

25 MS. ALSOBROOK: Okay.

1 MS. ZENK: And it does explicitly say in the
2 statute even for shortage of products or inventory
3 control, this is not a practice that can be
4 used --

5 MS. ALSOBROOK: There you go.

6 MS. ZENK: -- for exemption. It's explicit.

7 MR. PHILLIPS: I guess at one point will
8 hospital retailers need to have technology
9 required to be able to read these barcodes?

10 MS. ZENK: The 2D barcodes?

11 MR. PHILLIPS: Yeah.

12 MS. ZENK: That requirement -- so the
13 manufacturers place the serialized on the product
14 in 2017. If you look at the timeline, the
15 industry is not required to actually start to use
16 those barcodes outside of returns until 2023, so
17 2023. So the intent of it was to provide enough
18 time for the industry to understand technology,
19 change processes, change systems, and then allow
20 there to not be any impact to patient access to
21 medications. So there's this six-year window
22 where the manufacturers will continue to push
23 serialized product into the marketplace, but the
24 requirement to be able to actually scan and
25 capture that data will be 2023.

1 MR. PHILLIPS: What about the returns?

2 MS. ZENK: Returns is '19, at the end of '19.

3 MR. PHILLIPS: So really that's -- because
4 everybody does returns.

5 MS. ZENK: Yeah. But at that point, the
6 retailers are not required to, or the pharmacies
7 are not required to scan anything. It would be
8 the wholesalers who would have to scan it.

9 MR. PHILLIPS: Makes sense. Got you.

10 MS. ZENK: And it's just that 2 percent.

11 MR. PHILLIPS: Right.

12 MS. ZENK: And I think we have had some
13 people honestly say with the returns, well, maybe
14 I just won't take saleable returns anymore, which
15 I'm not sure from a business perspective that's a
16 good decision, but it is an option. Sorry about
17 all the editorializing.

18 I think upcoming activities that we're both
19 looking at as an industry and with the FDA, we are
20 looking at what we're calling exceptions pilots.
21 So I think of it as I either have physical product
22 and I don't have data that matches it or I have
23 extra data and no product.

24 So think about a serialized world, Pfizer
25 sends me 100,000 serial numbers. Did I get the

1 correct 100,000 units to match those 100,000
2 serial numbers? And if I didn't, what's our
3 process to resolve that?

4 So if I got two -- so say I got 100,000 units
5 but I only -- I got physical 100,000 bottles, but
6 I only got 99,000 serial numbers, what do we do?
7 And it's going to happen even if we're at even 1
8 or 2 percent error, that's a significant amount of
9 units. This is a whole level of data and
10 reconciliation that the industry hasn't
11 contemplated at this point, so how do we start to
12 resolve that?

13 So we're really starting to work -- actually,
14 we inside ABC we're in actually week two of our
15 exception pilot to say I'm getting data but it's
16 not matching, what types of electronic records can
17 we send? Because calling someone or tracking
18 someone down is probably not an option. And if we
19 have to quarantine the product that I don't have
20 the serial numbers for, we're going to be in a
21 world of hurt because we're going to run out of
22 physical space in unfortunately probably a short
23 amount of time.

24 We're also working with GTIN database.
25 Remember the new term for the product identifiers?

1 So the NDC will still exist, but how do we get all
2 of that new information without having to go to
3 every single manufacturer and every manufacturer
4 having to give that data? So what we're
5 attempting to try to do is have one central
6 repository where a manufacturer can load all of
7 their product information and it's standardized,
8 and then the whole industry extracts from that.
9 So they only have to update one time and the whole
10 industry can use that record.

11 Upcoming activities. There's a lot of
12 serialization pilots in play for different
13 reasons. And the FDA has kept saying they're
14 going to sponsor a serialization pilot. They
15 haven't come forward on what the details around
16 that are, but we are anticipating that to happen,
17 we're hoping within the next 24 months.

18 And then we also talked about the
19 verification query service, which, you know, I
20 kind of said is that central database where all of
21 the serial numbers come to and it routes it. I
22 think of it is if I search pants on the Internet,
23 it goes out and says, hey, you want to go to the
24 Gap, do you want to go to Banana Republic, where
25 do you want to go, that type of methodology.

1 (Inaudible.)

2 MS. ZENK: We're at questions anyway. So
3 that's really all that I had. And I do apologize,
4 I know some of that was very far into the details,
5 in the weeds, but I think -- to be fair, I think
6 that's where we're at as an industry. And we're
7 getting into the what this is going to look like.
8 These are barcodes that we haven't been using.
9 It's a level of serialization and level of data we
10 haven't used before, so we are starting to get
11 into the significant weeds around all of this.

12 MS. ALSOBROOK: The exceptions pilot, you
13 know, reporting of loss, you know, drugs in
14 transit or loss of samples or complimentary drugs,
15 the exceptions pilots, that will address things
16 like the lost in transit and things like that?

17 MS. ZENK: It will at some point. Really
18 right now what we're trying to say is I might have
19 the product and I might have the data but they
20 don't match.

21 MS. ALSOBROOK: But they don't match, okay.

22 MS. ZENK: So I think the other thing to
23 think through is this is a paradigm shift, too,
24 for the industry because we can move product
25 without data today by law legally in all the

1 states and in commerce. In the future, though,
2 we're going to have the data that's with the
3 product or we can't move either one.

4 MS. ALSOBROOK: The reason I ask the question
5 is once those products are found, they're going to
6 have a serial number on it, they're going to meet
7 the requirements of the law and they're going to
8 get back in the chain.

9 MS. ZENK: Uh-huh.

10 MS. ALSOBROOK: And who knows where they have
11 been stored, who's had them, et cetera.

12 MS. ZENK: Right.

13 MS. ALSOBROOK: Okay. And the other question
14 I had is the contract manufacturers, virtual
15 manufacturers, have you all decided who is going
16 to be responsible for those products that are
17 manufactured by those entities? Will it be the
18 actual manufacturer who hired them?

19 MS. ZENK: So right now, each manufacturer is
20 making that decision independently. And what we
21 are seeing is typically it's the manufacturer that
22 has put it into commerce and so they are holding
23 their trading partners to get that product to
24 finished good accountable for that.

25 We do see some that provide -- the contract

1 pharmacy provides data on behalf of the actual
2 label manufacturer, but most of the time, it's the
3 label manufacturer that's taking accountability
4 for it and providing the data is what we're
5 seeing. There's been some clunky conversations in
6 that space, too.

7 MS. ALSOBROOK: I imagine that would increase
8 the cost.

9 MS. ZENK: Cost of service, yeah.

10 MR. WILLENBROCK: This is John Willenbrock
11 with the Compressed Gas Association. I've got one
12 question.

13 MS. ZENK: Hi, John.

14 CHAIRMAN MAYS: Go right ahead, John.

15 MR. WILLENBROCK: On your FDA update slide,
16 it indicated that we're still waiting for FDA's
17 guidance on exemptions from product tracing
18 requirements. And the act itself -- with regard
19 to medical gases, the act itself has exempted
20 medical gases from the requirements of drug supply
21 chain security.

22 MS. ZENK: Correct.

23 MR. WILLENBROCK: I just wanted to make sure
24 that --

25 MS. ZENK: No, you are correct.

1 MR. WILLENBROCK: -- it wasn't an expectation
2 that we were waiting for guidance yet on that
3 activity.

4 MS. ZENK: No, you are correct, they do list
5 a high level category. Like I said, they also
6 list blood products and they list products used
7 for human fluid replacement, so they do have high
8 level categories.

9 I think that the intention was we didn't know
10 if the FDA was going to provide around those
11 exemptions maybe a central database where you have
12 to report it. We didn't know if there was going
13 to be some more structure and organization around
14 it. But by federal statute, they do have to
15 release guidance on waivers, exceptions and
16 exemptions. I think the exemptions, though, John,
17 are more for, you know, small businesses or
18 burdens that couldn't be met by businesses.

19 But good question, or clarification.

20 MR. PHILLIPS: So I guess I'm speaking from
21 the retail pharmacy, hospital pharmacy. What are
22 the, I guess, technology changes that need to be
23 implemented in the next, say, year? Are there
24 any?

25 MS. ZENK: We have seen a lot of our,

1 particularly like the large health systems that
2 have really complicated networks where they might
3 be receiving product at 700 locations in a large
4 campus. It's not uncommon.

5 Many of them have gone and issued a third
6 party to help them make sure they are obtaining
7 all of the TI, TH, TS in the marketplace. So
8 there are technology companies out there that can
9 integrate into your pharmacy operating systems or
10 integrate into your receiving processes, so we are
11 seeing some do that. But, otherwise, we're just
12 really encouraging the dispenser community, talk
13 to your wholesaler, understand how your wholesaler
14 is providing you the TI, TH, TS. And then if you
15 need any guidance, you know, we're here as a
16 resource, too.

17 And I know, like I said, my peers in this
18 space are equally as open to it, but we're really
19 trying to say until we understand more about
20 serialization, if I was a retailer, I probably
21 wouldn't invest in any new technology until we
22 work out a lot of the kinks between the
23 manufacturers and wholesalers, not that I want it
24 to be our burden, but I would sit tight.

25 MR. PHILLIPS: In terms of the drop

1 shipments, you mentioned that the manufacturers
2 are responsible for switching over to an
3 electronic format.

4 MS. ZENK: Uh-huh.

5 MR. PHILLIPS: I guess at what point is it --
6 because at some point I would assume --

7 MS. GREENE: Speak up so everybody can hear
8 you.

9 MR. PHILLIPS: At some point we would need to
10 ensure that the retailers and hospitals also have
11 the technology to receive that electronic
12 information?

13 MS. ZENK: Yes. Well, the FDA has published
14 also that electronic can be email, because we joke
15 the E stands for electronic. Like, honestly, we
16 joke. But they said they could put it in a PDF
17 record and email that record to a hospital.

18 What we're seeing most of the manufacturers
19 do is have one of those third parties and they
20 have a hosted website. So in theory, what you
21 would do is they would give you credentials so I
22 could log on as Heather's Pharmacy and I could see
23 all of my drop ship TI, TH, TS records and that
24 manufacturer would provide it to that portal
25 location.

1 They're saying that that meets the definition
2 of electronic per a previous FDA guidance. So
3 that's what we're seeing most of the manufacturers
4 of the drop ship frequently go down that path to
5 provide that service. We are seeing some, though,
6 that are providing electronic records but the vast
7 majority of them are using the portal concept.

8 MR. PHILLIPS: Thank you.

9 MS. ZENK: Good question, though.

10 Yes, sir.

11 MR. HART: Hi, Heather, this is Peter Hart.

12 You talked about in your pilot that you're
13 looking at situations where you may get the
14 material, you may not have the data, and you
15 talked about how in the current state we struggle
16 with situations where the information is being put
17 on but it's not correct.

18 MS. ZENK: Correct.

19 MR. HART: So are you encompassing that
20 scenario in your current pilot of what happens?

21 MS. ZENK: The first pilot we did with all
22 the barcode pictures, that was what we learned.
23 So we've gone back to those manufacturers and
24 applauded them for their effort but cautioned them
25 on the fact that as they go forward, the industry

1 won't be able to read these barcodes so it's
2 almost like you didn't do anything.

3 So we're asking those manufacturers to modify
4 and go towards GS1 standards and HDA standards and
5 use those two guidelines and tell them that's
6 where they need to go forward in order to be
7 compliant or in order to have a wholesaler be able
8 to read it.

9 MR. HART: But even in that, we're still
10 going to have this scenario that you've alluded to
11 here?

12 MS. ZENK: Yes. And that's where we're
13 really looking at what electronic transactions can
14 we use. So it is going to be I provide here's the
15 serial number I have, I don't have it, I can't
16 read it. You know, what information will we need?

17 And some of it is it's all new for the
18 industry, we don't have a standardized electronic
19 record. So we're trying to prove one out and then
20 we will share it with the industry and say is this
21 acceptable to everybody because otherwise we're
22 never going to land on one and we're going to end
23 up doing different datasets with each manufacturer
24 or each hospital and it's going to turn into
25 something that's unwieldy.

1 MR. HART: I guess my question is are you
2 looking at any processes of downstream corrections
3 of that information?

4 MS. ZENK: Not at this point. We know that
5 we can't alter the manufacturer's label. So if
6 they can't apply that right, unfortunately we're
7 kind of dead in the water.

8 With the data, though, we have talked about
9 if you send me incorrect data, do you want me to
10 request here are the serial numbers I have? Can
11 you give me the right data or did -- some want us
12 to tell them what I received versus what I didn't.
13 So we're really trying to work at it. We don't
14 have it defined yet.

15 I think most of the manufacturers have said
16 if I have the product without data, tell me what
17 serial numbers you have and then they will do an
18 internal investigation to say, oh, shoot, we
19 accidentally sent those to another trading
20 partner, they're a legitimate product, they were
21 inside our control, I'll just send you the new
22 records, TI, TH, TS. Where others are, oh, shoot,
23 how in the heck did you get that? I don't want
24 you to move it, please return it to me. I'm going
25 to do an internal investigation, it might be

1 suspect.

2 So we're trying to work through with that.
3 But that's kind of where we're landing, where we
4 think we're going to just say I have these and I
5 don't have data.

6 MR. HART: Okay.

7 MS. ZENK: The other way is a little more
8 complicated.

9 CHAIRMAN MAYS: Any other questions from
10 Council members?

11 (No response.)

12 MS. ZENK: If not, thank you for the time. I
13 know time is precious doing these. Hopefully it
14 was helpful.

15 CHAIRMAN MAYS: Heather, I do have a question
16 kind of backing up into today's environment. I
17 know a lot of the states, a lot of the other
18 states are implementing the rules and passing
19 statutes in the states. Are there any kind of
20 challenges that have come up, you know, dealing
21 with different state requirements in today's
22 environment?

23 MS. ZENK: Yeah. So I think what we see is
24 really good intentions but all of the states,
25 knowing that now it's been a couple of years and

1 it's not brand shiny new anymore, how do we move
2 forward. And they're looking at -- most of the
3 states I think last year tried to figure out what
4 vehicle do I put it on? Do I have to do it
5 legislatively? Can I do it in rules?

6 I think last year we saw a lot of states what
7 I call getting organized. And this year we are
8 seeing a lot of activities. Don't exactly quote
9 me on this, but I think we're between 11 and 14
10 states right now that have something in place to
11 fix. And what we see is -- the biggest thing is
12 to mimic the definitions in DSCSA. So if we can
13 get the definitions mimicked, we can typically get
14 the rest of it correct.

15 Where we are seeing some inaccuracies is
16 around some of the state licensure requirements
17 not being maybe completely cleansed from
18 transactional information records. So we're
19 seeing some states, because it's under their
20 licensing provisions, that they're still feeling
21 that there's some traceability data elements that
22 can stay in that because it's under licensing,
23 where I think the industry feels like, no, that's
24 really a traceability data element and that
25 shouldn't be under that licensing component still.

1 So we still are seeing I guess some push and
2 pulls.

3 And the other thing is we are seeing this --
4 because the federal statute is all ownership.
5 We're seeing some states struggle with but I want
6 to know physically where it is, the possession.
7 And that I think now is the industry -- becoming
8 very difficult for the industry to adhere to
9 because we've moved to the federal of I'm adhering
10 to the change of ownership, I'm not necessarily as
11 focused on or have the ability to reproduce
12 records as quickly on where it's physically
13 located.

14 CHAIRMAN MAYS: Any other questions from
15 Council members?

16 (No response.)

17 CHAIRMAN MAYS: Any other questions from
18 interested parties on the line?

19 (No response.)

20 CHAIRMAN MAYS: Okay. Thank you, Heather.
21 Mr. Dixon, are we in good shape for time?

22 MR. DIXON: Yes, sir.

23 CHAIRMAN MAYS: We were in a little bit of a
24 crunch.

25 So we'll turn it over to Mr. Dixon to give us

1 the Division Director's report under Tab 2.

2 MR. DIXON: Good morning. What you have in
3 front of you on Tab 2 is the rules report for the
4 Division. As you all may be aware, we've been
5 working on our applications, trying to streamline
6 our applications, so this is an update right now.

7 We have gone through, and you'll see we
8 actually put kind of a key code at the bottom just
9 to give you an idea of where we're at. The
10 Division has been -- is there, we're working on
11 them. We've got a couple of applications right
12 now that are -- we just received in the last day a
13 correspondence from the Joint Administrative
14 Procedures Committee which is actually basically a
15 very short correspondence that we think we'll be
16 able to readily address and file a response to
17 that.

18 What we're trying to do with these
19 applications -- and some of them may get a little
20 bit longer, not too much longer, but what we
21 really want to do is make sure that we give
22 people -- that we make the questions obvious. In
23 some sense, when we went through our applications,
24 we realized that some of the applications, it was
25 difficult for people to answer in the sense that

1 it could be the same and so we've had some
2 conversations with people in the industry when
3 they asked us about the applications. So we hope
4 that the applications will be more user friendly.

5 One thing to talk about on our applications,
6 we are actually -- our Division and our Agency is
7 trying to move forward more with allowing people
8 to actually apply online, and not necessarily
9 meaning a paper application but applying through
10 our portal.

11 So as we work through the applications, we're
12 also working with the information that's being
13 requested through the portal because some
14 information for you wholesalers, you realize some
15 information is in statute so it is what it is and
16 there's a lot of information that needs to be
17 supplied.

18 So the tasks that we have in front of that,
19 if we make that an online process, is to make sure
20 that you can attach the documents, that it's not
21 going to break the matrix, so to speak, that you
22 can process it, you get a notification the
23 application has been received and that kind of
24 thing. So we're moving forward with those.

25 We've done about half of the applications.

1 We kind of set a goal this upcoming year to do the
2 other half. And hopefully with that, we'll be
3 able to see our deficiency rates going down, which
4 means that the applications are easier to fill out
5 and they're more understandable.

6 We don't really have any other rule making
7 that's going forward, but I'm here to answer
8 questions that you might have about anything on
9 our rule report and any upcoming rules that
10 anybody might have a question about.

11 MR. ELLIS: Reggie, will the application for
12 wholesale drug distributor that's being reviewed
13 by the Department now, will that come out where
14 we'll be able to take a look and see that form?

15 MR. DIXON: Yes. One of the things about the
16 application now, that application is a significant
17 application and it does have -- we know that there
18 are some automatic deficiencies that we've been
19 trying to work out. We've got a draft of that
20 application complete pretty much. I know our
21 experts in the field are still looking at it.

22 Part of our process that we try to do
23 internal before we put an application out is it
24 starts off, we come up with -- we look at what's
25 required by statute, we try to organize our

1 information in a way that seems kind of natural as
2 we come across it. And then once we get the
3 application, we'll send it to our permitting
4 chief, Ms. Burnett, and she'll go through it, get
5 responses from her. Once we get that information
6 together, then we send it to our enforcement folks
7 who are in the field, because part of the
8 application process helps us to not only gather
9 information for the application as far as
10 eligibility but also helps us expedite our
11 inspections.

12 For instance, if I know what kind of products
13 you're dealing with, then I know what to expect
14 when I go out and do the inspections so now I'm
15 not wasting your time versus if I know you're
16 dealing in controlled substance, I'm know what I'm
17 looking for, I just know that. So if you tell us
18 you don't have a quarantined area, well, we
19 already know you don't have a quarantined area.
20 So we're trying to split the baby a little bit
21 because we know we have limited resources.

22 So once the application is done and we notice
23 it, we'll provide it to the Council members as
24 well so that anyone who's got a question about why
25 we're asking certain information, then we can get

1 that input. Changing the application -- and this
2 is a small Division. I mean, there are more
3 people in this room than there is in the Division.
4 I'm being truthful. So being responsive to making
5 a change is not difficult. So that's kind of the
6 plan.

7 And hopefully -- you know, we think that it's
8 been working pretty well so we don't plan on
9 rocking the boat, we'll just keep sailing
10 hopefully and get everything going with you guys.

11 CHAIRMAN MAYS: Thank you.

12 MR. DIXON: Does anybody have any questions
13 about any rule making that the Division is working
14 on?

15 (No response.)

16 CHAIRMAN MAYS: Any questions from anyone on
17 the phone?

18 (No response.)

19 MR. DIXON: The next thing that we have on
20 here is legislation. Right now this is the only
21 bill that's out there. And basically what this
22 bill does in a nutshell is it removes the
23 requirement for cosmetic manufacturers to register
24 those cosmetic products with the Division, and
25 straightforward that's all it does.

1 Does anyone have any questions about that?

2 (No response.)

3 CHAIRMAN MAYS: It doesn't sound like it.

4 MR. DIXON: Okay. The next tab was a couple
5 of questions that we had that were raised by
6 Mr. Tuller. We had a conversation a little bit
7 about it so we thought it would be a good idea to
8 bring it in front of the Council and kind of
9 discuss. It's a little bit more about where we're
10 going in the future in trying to make applications
11 and all this other stuff more available.

12 The first question, the first issue deals
13 with electronic submission of the wholesaler
14 application as well as other applications in
15 general. So as the Division, we're looking at it
16 globally. And so part of the process that we have
17 to do when we get applications and stuff
18 electronically is we work with our technology
19 department to come up with a template that closely
20 mirrors the paper application and requires and
21 requests that same information.

22 So a little bit of the delay has been trying
23 to make sure we get the paper applications
24 together as well as looking at what we want to do
25 globally as a Division and process the

1 applications because the first one and the second
2 one are kind of tied together.

3 As you know, the law changed last year to
4 allow us to stagger the licenses. And you think,
5 oh, that's pretty cool because everybody will get
6 a two-year license or whatever, a three-year
7 license or whatever your termination is.

8 But when you peel back the onion a little bit
9 and you look at where our licensing is set up
10 right now, your license by statute expires at the
11 end of the month in which it was issued. So if
12 you get a license in January, it expires the
13 following January. If you get one in February, it
14 expires next February and so on and so forth. If
15 you got eight licenses that you didn't get all at
16 the same time, so now you got one expiring in
17 January, one in March, one in April, and June and
18 September, okay, and so that's every license that
19 we have.

20 So part of the thought process for trying to
21 increase the licensing was to alleviate some of
22 the continued licensing every year of wholesale
23 distributors. I mean, because, really, when we
24 talked to the industry, what we found was that
25 there's some folks that are in a constant state of

1 license application renewal, period.

2 But the challenge that we have is actually
3 trying to implement it because we have to write a
4 rule to do it. So do we write a rule that says,
5 well, if your permit expires -- if you got your
6 permit in January through March, that's going to
7 be a two-year license, if you got it through
8 whatever, it's going to be a one-year license and
9 you do it for a year and then now you have half of
10 the licenses expiring one year and half expiring
11 next year now you're on a two-year cycle. Or you
12 can do it every other month so that it evens the
13 workload out because worse case what could happen
14 for our permitting staff is you have a whole group
15 of people that all come in now in one month and
16 now we're dealing with that, you know.

17 So as easy as it sounds, it's very difficult
18 because not only do you have to implement it in a
19 way that we can still expedite the applications,
20 because we don't want to slow the applications
21 down, but you also have to go through rule making,
22 which requires the rule to be written for it to be
23 understandable and then for it to go through the
24 Joint Administrative Procedures Committee to look
25 at as well.

1 And then the other side of the Agency and
2 professional side, they have got a rule that sets
3 out a schedule where the renewals occur. So we've
4 kind of looked to that rule to kind of see how it
5 works.

6 One of the ideas that we're thinking of doing
7 it alphabetically, trying to do -- we've been
8 toying with the idea because we know that some
9 companies may want all their permits to expire at
10 the same time because it's just more efficient.
11 But the statute says it's in the time that you
12 receive it, so that may require another statutory
13 change or it may be a prorated license.

14 So the technical part of doing something that
15 seems relatively easy is taking us a little bit
16 more time because if we don't do it the right way,
17 it will really be a worse situation because now
18 you've got people trying -- and then we have to
19 fix it.

20 So we have looked at -- like I said, we
21 looked at the rule that the Division had, that the
22 Professional Division has, and we're trying to
23 figure out a way to stagger it in a way that makes
24 sense. So I think when that first rule comes out,
25 it may be a matter of trying to do a workshop to

1 see, because I think we all would think that most
2 people in the industry would want, if they could
3 have it, all of their permits to expire at the
4 same time.

5 One of the things that we tried to do in
6 product registration was make the product
7 registration permits and the products where they
8 expire at the same time as the manufacturer
9 permit. So in addition to the other permitting
10 licenses for the wholesale distributors, we're
11 also looking at that part of it, too. So it's
12 taking a little bit longer just because if you
13 don't do it right, it really can be -- it can
14 really be bad.

15 MR. TULLER: Hey, Reggie, not to interrupt
16 you. This is Jeff Tuller.

17 Have you looked at all of the other states
18 and how they do it? You know, I've been
19 intimately involved with this for about three
20 years, and Florida, it seems, the process -- the
21 way the process works, we have to have a 45 -- we
22 have a hard cutoff on 45 days prior or there's a
23 penalty. No other state does that.

24 And then in terms of when the permit is -- or
25 the license is actually issued, it seems to take

1 longer than the actual process in comparison to
2 everybody else. Have we looked at how all of
3 these other states do this? Do they have a hard
4 cutoff date? Because if you look at June, for
5 example, I have 16 renewals in June, I've got 14
6 in April. You know, they do it half year and done
7 kind of a cross-analysis and said, you know,
8 generally speaking what's easier for, you know,
9 taking your resources into consideration, taking
10 into account, you know, what that application
11 involves because that application, it's 11 pages.
12 And then you have a PIS statement for every
13 individual within the corporation that has to be
14 filled out, and it is very comprehensive.

15 And I'm not faulting us for doing
16 comprehensive work. I think it's terrific. And
17 for all the reasons you mentioned in terms of
18 compliance, in terms of regulation, in terms of
19 enforcement, you have a back story here to do
20 that.

21 What I was hoping was, number one is we slim
22 this process down where your initial process is
23 all the paperwork and you do the due diligence
24 proper and very forthright and great, that's the
25 way to do it. California does it very similarly.

1 But after that, you go to a renewal process
2 that's somewhat streamlined, as long as there's no
3 significant changes, change of ownership, change
4 of location, those type of things where you have
5 to drill into a little further to the details.
6 And you guys drill into details so I'm preaching
7 to the choir here from what I see. So that was
8 kind of my impetus of that. So looking at other
9 states and comparing that, I would be happy again
10 as a sidebar here.

11 MR. DIXON: No, one of the things that we
12 have not done, we have not looked at other states.
13 Truthfully we just didn't have the resources. A
14 perfect example of that is we were recently tasked
15 with the Office of Policy -- OPPAGA, it stands for
16 the Office of Performance and Governmental --
17 Program Performance and Governmental
18 Accountability -- with some regulations that we
19 were working on, and we ended up having to do a
20 50-state calendar survey. It took two months. I
21 mean, it really choked out our performance as a
22 Division in that, you know, we've got 30.5 people.
23 And just imagine trying to do, you know, the
24 cross-section study of all 50 states.

25 But having said that, one of the things that

1 we have looked at with licensing is a renewal
2 process where -- like, for instance, one of the
3 things we put in the statute for wholesale
4 distributors, it talks about their personal
5 information statement. We're trying to streamline
6 it.

7 One of the ideas we got from the industry was
8 if nothing changed, why not create an affidavit,
9 submit an affidavit and attach the prior PIS
10 statement. So we're looking at that. We've also
11 looked at the possibility of allowing folks that
12 if nothing has changed, to provide us an affidavit
13 to that effect.

14 One of the issues that we do have is right
15 now in the statute for at least the wholesalers,
16 it requires to provide all of that information.
17 So that's one of the things that we were looking
18 at.

19 But as an Agency and as a Division, we have
20 been looking at that to try to make sure --
21 because if we can streamline that process, then it
22 gives us an opportunity to get permits out, issued
23 fast. So we have looked at that. I know we're
24 looking at the statutory requirements for
25 renewals.

1 As far as the penalty, I'm not sure why the
2 penalty went into place. I could guess that it's
3 probably to incentivize folks to apply early
4 enough so that you don't have the situation where
5 if you don't -- because if you don't apply on
6 time, then your permit expires. If you get your
7 application in ahead of time before the permit
8 expires, then you can continue to operate.

9 But I think the way Florida law is written is
10 if your expiration date is on the 31st and that
11 application is not postmarked by the 31st, the
12 application is postmarked on the 1st, you have not
13 timely renewed and we cannot as an Agency tell you
14 that you can continue to operate.

15 So I think that penalty was put in there --
16 like I said, I wasn't around, I'm not sure how
17 many people were around -- but I think it was put
18 in there to say, well, most folks want to save the
19 money so they're get the application in in a
20 sufficient time so even if we don't get the
21 application approved prior to the renewal, then we
22 can tell you based on the fact that you got your
23 renewal application in early you can continue to
24 operate.

25 MR. TULLER: Reggie, again, not to interrupt

1 you, but I think when you come to that penalty,
2 you can do it in reverse. You can actually -- you
3 pay it by this date, you pay X, you pay it by the
4 end date, you pay Y, versus you're paying, you
5 know, Y plus the fee.

6 Do you follow what I'm saying?

7 MR. DIXON: Absolutely. I think that's okay.

8 MR. TULLER: So these are little things. I
9 don't know what it means to us in comprehensive
10 numbers, and I have no idea what those numbers
11 are, but I would be happy to give you some of
12 those ideas.

13 MR. DIXON: Yeah, I don't think it's a
14 revenue-generating issue.

15 MR. TULLER: Then if it's not, then incent to
16 have it early.

17 MR. DIXON: I think the problem is --

18 MR. TULLER: And then I think you'll have the
19 response that you're looking to get.

20 MR. DIXON: I just think the problem might
21 be, from what I can tell just from the last couple
22 of years, we would not want -- we try not to be in
23 a position of having to tell folks you can't
24 operate. And we've come across that a couple of
25 times where people accidentally didn't do it. And

1 what we've had to tell folks -- and it doesn't
2 happen a lot, but we've had to tell people we
3 can't give you a letter that says you're
4 authorized to continue working.

5 MR. TULLER: Yeah.

6 MR. DIXON: Even though what you are
7 providing, the service or the medication that
8 you're providing -- in some cases, there was a
9 shortage of medications. So I do think that that
10 may be the problem for it.

11 Changing the legislation on that can be
12 difficult in a sense that it took us I guess two,
13 two and a half years to get at least as close to
14 being as DQSA compliant as we could with the bill
15 last year. As an Agency, what we try to do is we
16 solicit input from the industry as to possible
17 bills, but at some point it is a policy call on
18 whether or not the Agency actually will put forth
19 a bill that changes the provisions of Chapter 499.

20 But what we will do if someone in the
21 industry puts forth a bill, if they work through
22 their lobbying efforts to get a bill, what we
23 do -- they always -- normally folks will meet with
24 us ahead of time and then we'll talk about the
25 language. And then if they write a bill and they

1 get a sponsor or whatever, then we will give them
2 our input on how to make the bill better or
3 possible ramifications to the industry or we've
4 contacted people and we've spoken to people about
5 the bill.

6 I can tell you this year our Agency does not
7 have a bill that changes anything in 499. I know
8 that there is a cosmetic regulation bill --
9 registration bill. I'm not sure of the process as
10 to whether or not that's open to someone to tag on
11 changes to the licensing applications for
12 wholesaler distributors. It may be something that
13 someone may want to look into.

14 MR. TULLER: Sure.

15 MR. DIXON: You know, we can provide input
16 and resource into background information that you
17 all like on that, that wouldn't be a problem at
18 all.

19 MR. TULLER: Correct me if I'm wrong, but
20 your PIS statement that every wholesaler has to
21 fill out this year does have a signature and a
22 check box that says if there's no changes you move
23 to, you know -- and I think there's two sections
24 where you check off and move on. I did them last
25 night so I was kind of looking over all of this

1 before I came to see you, so I think you do have
2 that in place, an affidavit. You do have a
3 signature affidavit. You do have to supply the
4 proper documentation, pictures and so on and
5 forth.

6 MR. DIXON: Right.

7 MR. TULLER: Nobody else requires those
8 things.

9 MR. DIXON: We tried to update the PIS
10 statement to make it easier for folks.

11 MR. TULLER: Right. If I don't get a
12 deficiency letter, Reggie, I'll be glad. I think
13 you've moved in that direction and I thank you for
14 moving in that direction.

15 MR. DIXON: One of the things about us being
16 a smaller Division, truthfully, is we have to be
17 more efficient, we have to try to work on the
18 applications, we have to try to do things.
19 Because if it's a deficiency for you, that means
20 we've got somebody in the office that's got to be
21 responsible for tracking it, for following up with
22 you, for reviewing additional information that you
23 send in, so that's time on our staff where they
24 could be doing something else, too.

25 MR. TULLER: Well, Reggie, at the point where

1 your license is in limbo, that's when the due
2 diligence process starts because everybody's
3 asking you for that copy of your Florida license.
4 And we're distributors in Florida so, you know, I
5 get the calls and we don't have it and they go to
6 the website. We don't want to go to the website,
7 we need the verification. So that creates the \$25
8 check that goes to the board that we have to get a
9 verification to send to people while we're all in
10 limbo and all in process even though I've
11 submitted in 45 days. I'm just trying -- whatever
12 we can do to shorten that process, streamline,
13 make more efficient would be very helpful I think
14 to us all in the wholesale world.

15 MR. ELLIS: There is a chapter in -- or a
16 statement in 499 that addresses, that you can send
17 to the manufacturers or whomever.

18 MR. TULLER: I do. I have.

19 MR. ELLIS: Okay.

20 MR. TULLER: The problem is some of them want
21 the gold seal, you know, they want the gold seal.
22 And then they get the gold seal. And it seems
23 like when the application comes in, the check goes
24 in one direction, I guess, and the processing
25 happens in another. So a lot of times I have to

1 go back and research a check to send over to you
2 to again release the gold seal.

3 MR. DIXON: Yeah. And part of our process is
4 that when an application comes in, the check and
5 the application gets separated on the profile so
6 that the revenue is received and the application.
7 We have a team within the Agency that will scan
8 all the applications in, profile it, meaning
9 putting certain demographic information with the
10 application so that our licensing team can process
11 the application without always having to have all
12 the paper all over the place. And sometimes
13 there's a lag between the time that the check is
14 received and the time the Division actually gets
15 that profile information, yes. We try to cut the
16 time down.

17 MR. TULLER: Yeah. Just a point of interest
18 here that I wanted to bring up, so I appreciate
19 your comments on that, Reg.

20 MR. DIXON: I tried to put those two
21 together. But were there any other questions
22 about what the Division is trying to do with
23 respect to our applications, online applications?

24 (No response.)

25 MR. DIXON: Like I said, again, as the paper

1 applications get done, what you'll see is
2 hopefully the PIS statements, we will make it a
3 lot easier for you all to fill out those. And as
4 you come across those, I suggest that you see
5 things about them and you submit them to us, we'll
6 look at them and we'll try to -- and that's kind
7 of how we try to improve the application.

8 And sometimes it takes a little while longer
9 to do the rule making, it takes usually about 90
10 days. So it may be a little bit longer sometimes
11 when the applications are more complicated or
12 you're trying to make sure that you're putting
13 certain things in the right way so that, you know,
14 you're not answering the same question four or
15 five different ways, that kind of thing.

16 But any questions that you all have regarding
17 the applications or any rule making? If you don't
18 have any, you can always send them to us. You can
19 send them to Ms. Greene and she will make sure
20 they get to the appropriate folks.

21 MR. ELLIS: Reggie, is the licensure term, is
22 that a legislative change or is that a rule
23 that --

24 MR. DIXON: It is a legislative change that
25 gave the Department rule-making authority. So

1 before that legislative change if you were a
2 wholesaler, you could only get a one-year permit.

3 MR. ELLIS: Okay. So the term that the
4 permit can be is a rule change now?

5 MR. DIXON: Right.

6 MR. ELLIS: You can do that under a rule
7 change?

8 MR. DIXON: Right.

9 MR. ELLIS: Okay. Great. Thank you.

10 MR. TULLER: 3PL's are two years, correct?

11 MR. DIXON: 3PL's are a two-year permit, yes.

12 Are there any other questions about Tab 3?

13 (No response.)

14 CHAIRMAN MAYS: Any questions from anybody on
15 the phone?

16 (No response.)

17 CHAIRMAN MAYS: Finally the last thing under
18 Tab 4, just for informational purposes, you'll see
19 the meeting transcript from our December 1st
20 meeting.

21 Is there any other business for the Council?

22 (No response.)

23 CHAIRMAN MAYS: Anything from anyone on the
24 phone?

25 (No response.)

1 CHAIRMAN MAYS: Hearing none, do we have a
2 motion to adjourn?

3 MR. TULLER: So moved.

4 MR. ELLIS: Second.

5 CHAIRMAN MAYS: All in favor, say aye.

6 (Chorus of ayes.)

7 CHAIRMAN MAYS: Opposed.

8 (No response.)

9 CHAIRMAN MAYS: The meeting is adjourned.

10 Thank you.

11 (Whereupon, proceedings were concluded at
12 11:00 a.m.)

CERTIFICATE OF REPORTER

STATE OF FLORIDA)
COUNTY OF LEON)

I, MICHELLE SUBIA, Registered Professional Reporter, certify that the foregoing proceedings were taken before me at the time and place therein designated; that my shorthand notes were thereafter translated under my supervision; and the foregoing pages, numbered 3 through 80, are a true and correct record of the aforesaid proceedings.

I further certify that I am not a relative, employee, attorney or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorney or counsel connected with the action, nor am I financially interested in the action.

DATED this 2nd day of March, 2017.

MICHELLE SUBIA, CCR, RPR
NOTARY PUBLIC
COMMISSION #FF127508
EXPIRES JUNE 7, 2018
