INFORMATION TO ASSIST THE USER

From the Preface to the 1999 FDA Food Code, Part 8

Many of the improvements contained in the model Food Code as listed under item 5 . . . [of the Preface] are provided to make the document easier to use. Other characteristics of the new edition, if they are understood by the user, make it easier to follow and apply. These include structure, nomenclature, and methodology.

Food Code provisions address essentially four areas: personnel (Chapter 2), food (Chapter 3), equipment/facilities/supplies (Chapters 4,5,6,7), and compliance and enforcement (Chapter 8). A new user will find it helpful to review the table of contents together with the Inspection Guide (Annex 7) in order to quickly gain an understanding of the scope and sequence of subjects included within these four areas.

The structural nomenclature of the document is as follows:

Chapter	9
Part	9-1
Subpart	9-101
Section (§)	9-101.11
Paragraph (¶)	9-101.11(A)
Subparagraph	9-101.11(A)(1)

Internal cross referencing is widely used throughout the document to eliminate the need for restating provisions. For example, fixtures and devices necessary for handwashing are relevant to both the plumbing (Chapter 5) and the facilities (Chapter 6) portions. To alert the reader to relevant information and provide a system by which each violation is recorded under the one most appropriate provision, the Code uses the phrase "...as specified under (followed by a Code cite such as a section or paragraph)." It must be determined within the context of the provision whether the cross reference simply provides information to explain the requirement or whether the observed violation is properly recorded against the provision that is cited after the word "under."

The Food Code presents requirements by principle rather than by subject. For example, equipment requirements are presented under headings such as Materials, Design and Construction, Numbers and Capacities, Location and Installation, and Maintenance and Operation rather than by refrigerators, sinks, and thermometers. In this way provisions need be stated only once rather than repeated for each piece or category of equipment. Where there are special requirements for certain equipment, the requirement is delineated under the appropriate principle (e.g., Design and Construction) and listed separately in the index.

Portions of some sections are written in *italics*. These provisions are not requirements, but are provided to convey relevant information about specific exceptions and alternative means for compliance.

Requirements contained in the Food Code are presented as being in one of 3 categories of importance: critical; "swing" (i.e., those that may or may not be critical depending on the circumstances); and noncritical. An asterisk * after a tagline (which is the language immediately following a section number that introduces the subject of the section) indicates that all of the provisions within that section are critical unless otherwise indicated, as follows:

Any provisions that are "swing" items, are followed by the bold, superscripted letter ^S and any provisions that are noncritical are followed by the bold, superscripted letter ^N.

Any unmarked provisions within a section that has an asterisked tagline are critical. All provisions following a tagline that is not marked with an asterisk are noncritical.

Defined words and terms are capitalized in the text of the Food Code chapters to alert the reader to the fact that there is a specific meaning assigned to those words and terms and that the meaning of a provision is to be interpreted in the defined context. A concerted effort was also made to capitalize all forms and combinations of those defined words and terms that were intended to carry the weight of the definition.

The annexes located at the back of the document can provide tremendous assistance to those charged with applying Food Code provisions. No reference is made in the text of a provision to the annexes which support its requirements. This is necessary in order to keep future laws or other requirements based on the model Food Code "clean." However, the annexes are provided specifically to assist the regulatory authority apply the provisions uniformly and effectively.

It is, therefore, important for users to preview the subject and essence of each of the annexes before using the document. Some of the annexes (e.g., References, Public Health Reasons) are structured to present the information by the specific Food Code item number to which they apply. Other annexes provide information and materials intended to be helpful to the user such as model forms that can be used, a delineation of the principles of HACCP, guidelines for establishment inspection, and criteria for certain food processes for use in evaluating proposed HACCP plans.

Summary of Changes to the FDA Food Code Chapters 1—7

This Summary provides a synopsis of the textual changes from the 1997 FDA Food Code Chapters and Annexes to the 1999 edition. The primary intent of this record is to capture the nature of the changes rather than to identify every word or editing change. This record should not be relied upon as an absolute comparison that identifies each and every change.

General:

- Numerous editing changes were made throughout the document for internal consistency, to correct some errors in the '97 Code and for clarification.
- Italics and capitalization of *Salmonellae* are modified throughout the document, with the exception of Annex 2 where titles of published documents remain unchanged. The modifications reflect current, commonly recognized conventions used in the scientific community. Species of *Salmonellae* are not italicized and begin with a capital letter.
- Defined words and terms are in small capital letters throughout the Chapters and Annex 1 to highlight that they have a specific meaning within the context of the Code. Refer to the Preface, Information to Assist the Reader, for a discussion of this feature.
- Section numbers listed refer to the 1997 Code unless otherwise noted. Definition numbers listed refer to the 1999 Code. Renumbering occurred in the 1999 edition, based on the changes made.
