

# UNDERGROUND UTILITY CONTRACTORS GENERAL TRADE KNOWLEDGE EXAMINATION CONTENT INFORMATION

Effective September 9, 2014

The General Trade Knowledge portion of the examination is administered daily in Computer Based Testing (CBT) format. It will consist of 80 equally weighted questions.

The examination will have questions relating to the following content areas and necessary knowledge for each area includes:

- reading and interpreting plans and specifications
- reading and interpreting codes
- basic mathematics

   (addition, subtraction, multiplication, division, calculations of area and volume, fractions, decimals, percentages, calculating the sides of triangles, square roots, powers of numbers, and solving simple algebraic equations for unknown variables)

You should be prepared to respond to examination questions on any of the content areas listed. Questions asked and content areas tested on previous examinations should not be assumed to be the only possible questions to be asked or content areas to be tested on this examination.

The percentage of questions shown for each content area may vary by as much as plus or minus three (3) percent. Please refer to the Candidate Information Brochure and the Reference List for additional information.

### Content Area A Pre-Installation

20%

### 1. Performing a visual inspection of site and equipment

knowledge of equipment needed for site work ability to identify obstructions and access points knowledge of removal of site debris knowledge of types of equipment knowledge of figuring quantity of materials

### 2. Review plans and specifications and recommend changes

knowledge of construction techniques knowledge of local utility specifications knowledge of plans and materials specifications knowledge of latest pipe technologies knowledge of estimating

#### 3. Preparing shop drawings

knowledge of standards (e.g., ASTM, AWWA) knowledge of materials specifications and products ability to organize, read, and understand specifications and plans

### 4. Reviewing federal, state, and local codes and ordinances

knowledge of pre-installation requirements knowledge of local code requirements and jurisdictions of utility districts knowledge of references, sources of codes and ordinances knowledge of MSDS's knowledge of SWPPP (Storm Water Pollution Prevention Plan)

#### 5. Determining location of excavations

knowledge of invert elevations knowledge of basic surveying and layout techniques knowledge of safety requirements knowledge of recording pre-existing job conditions (e.g., location of existing utilities) knowledge of sub-surface ground conditions

#### 6. Digging test holes to determine water levels

knowledge of drilling equipment and practices knowledge of existing utilities knowledge of seasonal variations

### 7. Coordinating and directing soil preparation and testing soil and ground water

knowledge of excavating and soil composition knowledge of soil and water testing procedures knowledge of potentially contaminated soils

#### 8. Determining burial depth and slope

knowledge of excavation knowledge of surveying and leveling techniques

### 9. Locating existing utilities and underground obstructions

knowledge of where to find information knowledge of when and how to notify the appropriate authority knowledge of permissible working conditions

#### 10. Complying with erosion control guidelines

knowledge of erosion control guidelines knowledge of turbidity and testing

#### 11. Unloading, lifting and transporting pipes

knowledge of weight capacity of front end loaders knowledge of cabling and rigging or other material

knowledge of handling equipment

#### 12. Stacking and storing pipes

knowledge of dividers knowledge of appropriate conditions for stacking and storing pipes

#### 13. Reading plans and specifications

knowledge of plan scales and symbols knowledge of cross sections and profiles knowledge of geotechnical reports

### Content Area B Traffic Control

5%

### 1. Complying with traffic control laws and contract requirements

knowledge of traffic codes and regulations ability to communicate with emergency services knowledge of current MOT requirements

### 2. Erecting and positioning road signs, cones, barricades and detours

knowledge of traffic codes and regulations

### 3. Applying temporary pavement markings knowledge of traffic codes and regulations

#### 4. Managing and coordinating flaggers

knowledge of traffic codes and regulations knowledge of location of stockpiled material along right-of-way

#### Content Area C Excavating, Backfill, and Compaction

### 20%

#### 1. Constructing trenches

knowledge of pipe layout knowledge of appropriate widths for different pipes knowledge of surveying techniques knowledge of shoring techniques knowledge of soil types knowledge of OSHA requirements (e.g., competent person on job site)

#### 2. Calculating excavation and backfill

knowledge of effects of compaction knowledge of soil properties

#### 3. Removing trees, shrubs, and fences

knowledge of excavation equipment knowledge of demolition

#### 4. Cutting and replacing pavement

knowledge of safety knowledge of local specifications and regulations knowledge of asphalt types

#### 5. Performing dewatering

knowledge of pumping techniques knowledge of well points knowledge of piping hook-up knowledge of soil permeability and drainage knowledge of water table knowledge of drawdown knowledge of sock drains knowledge of turbidity and testing

### 6. Installing sheet piling and reinforcing requirements

knowledge of angles of repose knowledge of stress supports knowledge of wood piling knowledge of metal piling knowledge of OSHA regulations

#### 7. Utilizing trench boxes and shields

knowledge of excavating knowledge of soil properties knowledge of OSHA regulations

#### 8. Installing tunnels

knowledge of drilling knowledge of excavating knowledge of bracing knowledge of surveying techniques

knowledge of ventilation

knowledge of safety requirements

knowledge of dewatering

knowledge of pumps

#### 9. Jack and bore casings

knowledge of hydraulic jacking and boring equipment

knowledge of hydraulic jacking and boring procedures

#### 10. Trenching in non-cohesive soil or sand

knowledge of digging devices

knowledge of sheet piling

knowledge of soil properties

knowledge of angle of repose

#### 11. Installing pipe bedding

knowledge of appropriate types

knowledge of determining depth or thickness

needed

knowledge of grading

#### 12. Replacing finish surfaces

(e.g., asphalt, concrete)

knowledge of appropriate asphalt and concrete types

knowledge of testing

ability to layout and calculate volume and area

(square footage, cubic yards)

knowledge of grade and compaction

knowledge of curing periods

knowledge of local and state codes and

regulations

### 13. Installing filter fabrics and backfill migration preventers

knowledge of soils

knowledge of water tables

knowledge of filter fabric

### 14. Checking for required finish grade and invert elevation

knowledge of reading levels

knowledge of leveling and surveying techniques

#### 15. Proper sloping

### 16. Installing backfill material for pipes and structures

knowledge of different types of backfill materials

knowledge of correct grade surveying equipment knowledge of grade and compaction knowledge of proper backfill to support existing utilities after digging

### Content Area D Pipe Installation and Repairs

15%

### 1. Installing, replacing and repairing pressure pipes knowledge of types and

application

knowledge of placement

knowledge of associated fittings

knowledge of elevations

knowledge of laser grade beams

knowledge of survey instruments

knowledge of testing

knowledge of OSHA regulations

knowledge of local and state codes and

regulations

### 2. Installing, replacing and repairing gravity sewer pipes

knowledge of piping materials

knowledge of equipment

knowledge of pipe laser equipment

knowledge of survey instruments and techniques

knowledge of ground water

knowledge of pipe slopes and grades

knowledge of bedding requirements and

placement of bedding

knowledge of air testing

knowledge of proper compaction

knowledge of OSHA regulations

knowledge of assembly

knowledge of sealants

knowledge of preventing and testing for pipe

deflection

knowledge of trenchless installation procedures

knowledge of local and state codes and

regulations

#### 3. Installing piping for pumps

knowledge of capacity of different size pumps knowledge of fittings and valves

### 4. Installing manholes, lift stations and catch basins

knowledge of cutting and sizing of materials

knowledge of form work

knowledge of concrete mixtures

knowledge of concrete placement

knowledge of brick masonry

knowledge of surveying techniques

knowledge of drop connections

knowledge of handling

knowledge of working in confined spaces

#### 5. Placing grout

knowledge of mixtures

knowledge of properties

knowledge of setting time

knowledge of chemical grouting

knowledge of health risks involved

knowledge of applications of chemical grouting

knowledge of when and what type to use

#### 6. Removing asbestos cement pipe

knowledge of health risks

knowledge of federal and state laws

knowledge of proper disposal of broken cement

asbestos pipe

knowledge of license restrictions

#### 7. Using hydraulic cement

knowledge of properties

knowledge of setting time

knowledge of health risks and safety precautions

#### 8. Installing two or more pipes in one excavation

knowledge of spacing requirements

knowledge of backfill requirements

#### 9. Installing piers

knowledge of concrete mixtures

knowledge of reinforcing

knowledge of form work

knowledge of precast piers

knowledge of anchoring

#### 10. Installing a slip liner

knowledge of materials and procedures used for slip liners

#### 11. Installing pipe by directional boring

knowledge of pipe and slurry

knowledge of equipment and procedures

#### Content Area E Piping, Valves and Fittings

15%

### 1. Layout and determining pipes, valves, fittings and related components

knowledge of installation knowledge of replacement

knowledge of monitoring

knowledge of appropriate use of pipes of various

knowledge of appropriate use of valves, fittings, and related components of various materials

#### 2. Installing pump stations

knowledge of basic mechanics of pumps knowledge of slabs knowledge of foundations knowledge of walls

knowledge of working in confined spaces

#### 3. Installing fittings

knowledge of types and application for use

### 4. Installing backflow prevention devices, flow regulators and meters

knowledge of how flow regulators operate knowledge of how to set a flow regulator knowledge of meter types knowledge of meter installation knowledge of regulations governing backflow prevention

#### 5. Installing pumps and motors

knowledge of anchoring knowledge of piers and foundations

#### 6. Installing metal cathodic protection

knowledge of installation knowledge of coatings knowledge of local and state codes and regulations

#### 7. Installing fire hydrants

knowledge of types and placement

#### 8. Installing restraining mechanisms

knowledge of thrust blocks and placement knowledge of straps knowledge of tie downs and tie rods knowledge of megalugs and bell restraints knowledge of restraining schedules' knowledge of forces acting on pipes

#### 9. Installing main line and service taps

knowledge of tapping saddles knowledge of pressure taps knowledge of equipment for tapping and materials

## 10. Piping through walls (structures, lift-stations, manholes, valve pits)

knowledge of structures

knowledge of lift-stations

knowledge of manholes

knowledge of valve pits and sleeves

knowledge of sealing methods

#### 11. Installing pipes underwater

knowledge of piping material and material limitations

knowledge of anchoring

knowledge of pipe connection techniques

(cutting, welding, brazing, chemical bonding)

knowledge of mechanical connections

(threaded connections)

knowledge of leak detection

knowledge of hangers and supports

knowledge of pressure testing

knowledge of measurement

knowledge calculating and fitting

knowledge of thrust blocks

knowledge of drying procedures

knowledge of OSHA and other safety

requirements

#### 12. Installing pipe supports

knowledge of straps and hangers knowledge of concrete or other cradles

### Content Area F 10% Testing, Disinfecting and Job Close Out

#### 1. Preparing as-built drawings

#### 2. Testing gravity pipes

knowledge of calculations for infiltration

and exfiltration

knowledge of required equipment

knowledge of mandrel testing

knowledge of lamping procedures

knowledge of low pressure air testing

knowledge of TV testing procedures

#### 3. Testing Pressure pipes

knowledge of test pumps

knowledge of reading pressure gauges

knowledge of air test charts

knowledge of calculating for hydrostatic head

over top of pipe

knowledge of duration time of tests

#### 4. Flushing pipes before disinfecting

knowledge of time requirements knowledge of safety requirements

#### 5. Injecting chlorine or disinfectant into pipes

knowledge of safety requirements knowledge of application of chlorine or disinfectant

knowledge of storage and handling of chlorine

#### 6. Pulling bacteriological samples

knowledge of sampling procedures knowledge of D.E.P. requirements

#### 7. Flushing pipes after disinfecting

knowledge of time requirements knowledge of safety requirements

### 8. Assemble Operating and Maintenance Manuals

Knowledge of equipment and materials specifications

Knowledge of equipment operations Knowledge of documentation

#### 9. Perform Close Out Procedures

Knowledge of sign-off requirements Knowledge of document submission requirements

#### Content Area G Drainage Systems

5%

### 1. Installing, repairing, and replacing storm drainage systems

knowledge of appropriate types knowledge of drainage requirements knowledge of connecting to existing systems knowledge of coring knowledge of support bedding

#### 2. Installing oversize culverts

knowledge of appropriate types and applications knowledge of materials (e.g., structural plates, corrugated pipe)

knowledge of associated fittings

knowledge of placement

knowledge of safety requirements

#### 2. Installing standard CMP

knowledge of how to place knowledge of assembly knowledge of installation

#### 3. Installing retention or detention systems

knowledge of excavation knowledge of lining knowledge of shaping

#### 4. Installing perforated and underdrain pipes

knowledge of appropriate types and applications knowledge of associated fittings knowledge of safety requirements knowledge of placement

#### 5. Cleaning storm sewers

knowledge of proper cleaning procedures knowledge of pipe protection techniques knowledge of OSHA regulations

### Content Area H Equipment

10%

#### 1. Digging with backhoes, trenchers and tractors

knowledge of safety requirements knowledge of traffic regulations knowledge of rigging knowledge of equipment maintenance ability to determine lifting capacities of equipment used

#### 2. Using overhead hoists and cranes

knowledge of safety requirements knowledge of weights

#### 3. Using ventilation devices

knowledge of safety requirements knowledge of toxic materials knowledge of proper uses of equipment knowledge of sewer gas trapped in existing manholes knowledge of air monitoring devices

#### 4. Using lasers

knowledge of safety requirements knowledge of surveying techniques knowledge of equipment protection knowledge of proper setup knowledge of calculating percentage of grade

#### 5. Using surveying and engineering levels

knowledge of surveying techniques knowledge of surveying equipment knowledge to run levels

#### 6. Using dewatering equipment

knowledge of equipment, capacity, and installation of hydraulic, gas and electric pumps knowledge of well points and sock drain systems knowledge of soil types knowledge of rules of water management knowledge of dewatering alternatives

#### 7. Using compaction equipment

knowledge of compaction equipment knowledge of static and vibratory compaction knowledge of density requirements
